

# The Habitable Planet

A Systems Approach to Environmental Science Series

13 Volumes

EXCLUSIVE TO VEC

ANNENBERG LEARNER

“The Habitable Planet” series begins with an overview of the Earth’s systems: geophysical, atmospheric, oceanic, and ecosystems as they exist independently of human influence. It continues by exploring the effect that human activities have on these different natural systems. Topics include human population, growth and resource use, increasing competition for fresh water and climate change. Each of the 13 programs features two case studies following top scientists in the field.
